DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claim 1 is rejected under 35 U.S.C. 103 as being unpatentable over United States Patent 5,931,867 Haindl in view of United States Patent 5,776,161 Globerman.

Haindl discloses the invention substantially as claimed being an endoluminal stent comprising a substantially cylindrical body made up of rings interconnected by shaped interconnect struts (4), the rings comprising substantially oval shapes units (2) that are thinner at their top and bottom compared to their left and right edges connected together by articulating struts (5) shown best in figure 5. However, Haindl does not disclose that the articulating struts have a unicyclic waveform shape.

Globerman teaches the use of a stent comprising a cylindrical body made from oval shaped units having both interconnect struts and articulating struts that are unicyclic or s-shape (shown best in figure 20A) in the same field of endeavor for the purpose of providing better compression and expansion.

It would have been obvious to one having ordinary skill in the art at the time the invention was made to combine the s-shaped articulating struts as taught by Globerman with the stent framework of Haindl in order to provide a stent with a more compact compressed diameter and a larger expanded diameter.

Response to Arguments

Applicant's arguments with respect to claim 1 have been considered but are moot in view of the new ground(s) of rejection.

In regards to claim 1, the applicant is advised to reword the description for the shape of the articulating struts to say that they are s-shaped. They appear to have an s-shape very similar to the interconnect struts, which are currently described as being s-shaped.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
